1 Abstract

2 Introduction

The gig economy is in full effect, individuals get payed for the execution of short term contracts and big companys intermediate in the supply and demand of this labour. With the intermediation of these parties the companies profit of margins and deny individuals full ownership of the value of the produced labour. Recent advancements in peer-to-peer technologies and decentralized possibilities interest the academic domain if there are possibilities to shift towards decentralized solutions in the logistics domain[?][?][?].

3 Trustless

The definiton of trustless can be achieved if no entity is custodian of any process. In the domain of logistics a custodian will always be responsible for the actual transport of the physical good. This means that
